

```
In [ ]: #7) Differential between the standardization and  
#normalization - python.
```

```
In [ ]: Standardization& normalization are two way to scale the data value.  
to make standardize our data set we follow standard deviation  
technique
```

Normalization is reduced big data values into small but value will not be changed. That is called normalization. in this each value will follow 0 to 1.

```
In [ ]: #2) Explain the types of sampling in statistics-theory.
```

```
In [ ]: Sampling is finding mean,median,mode on sample data on  
the basis of population data. It is called inferential statistics  
also.
```
